DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

Regarding claim 3, the prior art fails to teach a combination of the steps of:

managing, at second transmission device, an elapse of the total frame time of the subsequent data frames by using the detected transmission timer value and managing an elapse of a time period by using a predetermined initial value when no transmission timer value is detected, for confirming that said transmission path is available; and transmitting one or more data frames in sequence from said second transmission device when said transmission path is confirmed being available, in the specific combination as recited in the claim.

Regarding claim 7, the prior art fails to teach a combination of the steps of:

setting, at said relay device, the transmission timer value for each of the data frames set as the data frames to be transmitted so as to indicates (m-k) frame time;

managing, at said relay device, an elapse of the total frame time of the subsequent data frames by using the detected transmission timer value for confirming that said transmission path is available; and

transmitting one or more data frames in sequence from said relay device to said second transmission device when said transmission path is confirmed being available, in the specific combination as recited in the claim.

Regarding claim 12, the prior art fails to teach a combination of the steps of:

said second transmission device, when received one or more of the data frames transmitted from said first transmission device, confirms, by said transmission timer provided therein, that said transmission path is available through an elapse of the time of suspending transmission, and then transmits one or more of the data frames to be transmitted constructed by said transmitting frame constructing portion in sequence, in the specific combination as recited in the claim.

Regarding claim 15, the prior art fails to teach a combination of the steps of:

said relay device, when received one or more of the data frames transmitted from said first transmission device, confirms, by said transmission timer provided therein, that said transmission path is available through an elapse of the time of suspending transmission, and then transmits one or more of the data frames to be transmitted constructed by said second transmitting frame constructing portion to said second transmission device in sequence, in the specific combination as recited in the claim.

Regarding claim 19, the prior art fails to teach a combination of the steps of:

when received one or more data frames, confirms, by said transmission timer, that said transmission path is available through an elapse of the time of suspending transmission, and then transmits one or more of the data frames to be transmitted constructed by said transmitting frame constructing portion in sequence, in the specific combination as recited in the claim.

Regarding claim 21, the prior art fails to teach a combination of the steps of:

when received one or more data frames transmitted from said first transmission device, confirms, by said transmission timer, that said transmission path is available

through an elapse of the time of suspending transmission, and then transmits one or more of the data frames to be transmitted constructed by said transmitting frame constructing portion to said second transmission device in sequence, in the specific combination as recited in the claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
